FUNCTION: MEDIATES THE ENDOCYTOSIS OF PLASMA GLYCOPROTEINS TO WHICH THE TERMINAL SIALIC ACID RESIDUE ON THEIR COMPLEX CARBOHYDRATE MOIETIES HAS BEEN REMOVED. THE RECEPTOR RECOGNIZES TERMINAL GALACTOSE AND N-ACETYLGALACTOSAMINE UNITS. AFTER LIGAND BINDING TO THE RECEPTOR, THE RESULTING COMPLEX IS INTERNALIZED AN TRANSPORTED TO A SORTING ORGANELLE, WHERE RECEPTOR AND LIGAND ARE DISASSOCIATED. THE RECEPTOR THEN RETURNS TO THE CELL MEMBRANE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      YHYSEKPMNWQRARRFCRDNYTDLVAIQNKAEIEYLEKTLPFSRSYYWIGIRKIG--GIW

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    FUNCTION: CONTRIBUTES TO THE LUNG'S DEFENSE AGAINST INHALED MICROPROANISMS. BINDS STRONGLY MALTOSE RESIDUES AND TO A LESSER MICROPROANISMS. BINDS STRONGLY MALTOSE RESIDUES AND TO A LESSER EXTENDENT OTHER ALPHA-GLUCOSYL MOISTIES. IT COULD PARTICIPATE IN THE EXTRACELLULAR REDROANIZATION OR TURNOVER OF PULMONARY SURFACTANT. SUBJUIT: OLIGOMERIC COMPLEX OF 4 SET OF HOMOTRIMERS.
SUBJUIT: OLIGOMERIC COMPLEX OF 4 SET OF HOMOTRIMERS.
SUBJUIT: OLIGOMERIC COMPLEX OF 5 SET OF HOMOTRIMERS.
MISCELLANGEDUS: PULMONARY SURFACTANT CONSISTS OF 90% LIPID AND 10% PROTEIN. THERE ARE 4 SURFACTANT ASSOCIATED PROTEIN: 2 COLLAGENOUS, CARBOHYDRATE-BINDING GLYCOPROTEINS (SP-A AND SP-D) AND 2 SMALL UNVOCCHOORST DEOTERNS OF 50.00.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CARBOHYDRATE-BINDING GLYCOPROTEINS (SP-A AND SP-D)
HYDROPHOBIC PROTEINS (SP-B AND SP-C).
SIMILARITY: CONTAINS A COLLAGEMOUS DOMAIN.
SIMILARITY: CONTAINS 1 C-TYPE LECTIN FAMILY DOMAIN.

IS FUNCTION: THIS PROTEOGLYCAN IS A MAJOR COMPONENT OF THIS PROTEIN MATRIX OF CARTILAGENOUS TISSUES. A MAJOR FUNCTION OF THIS PROTEIN IS TO RESIST COMPRESSION IN CARTILAGE. IT BINDS AVIDLY TO HYALURONIC ACID VIA AN AMINO-TERMINAL GLOBULAR REGION. MAY PLAY A PEGULATORY ROLE IN THE MATRIX ASSEMBLY OF THE CARTILAGE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PGCA_MOUSE STANDARL

lectin-like

molecule specific

for gal

```
A; Reference number: PX0009; MUID: 0717/0002

A; Accession: PX0009

A; Molecule type: protein
A; Residues: 102-120;137,'x',139-151 <ODA>
C; Superfamily: hepatic lectin; C-type lectin homology
C; Keywords: 9lycoprotein; lectin; macrophage; transmembrane protein
F; 36-61/Domain: transmembrane #status predicted <TRA>
F; 173-296/Domain: C-type lectin homology <LCH>
- 74 166/Binding site: carbohydrate (Asn) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  N;Alternate names: hepatic lectin H2a
N;Contains: ASGPR; asialoglycoprotein receptor H2a; asialoglycoprotein recept
